Getting it set up:

Windows: To run the program, you will need to have the python file Heart.py and text file inputs.txt in the same folder. Go to that folder in the command line and type either: python Hearts.py or python3 Hearts.py

Mac: To run the program, you will need to have the python file Heart.py and text file inputs.txt in the same folder. Go to that folder in the Terminal and type either: python Hearts.py or python3 Hearts.py

Running:

You will be asked to either enter in data manually or read from a input file that's already set up. Follow instructions as it presents it on screen.
